

## Prompt 1

### Prompt 2

```
CREATE TABLE users (  
  userid SERIAL PRIMARY KEY,  
  name VARCHAR(20),  
  username VARCHAR(20),  
  address VARCHAR(20),  
  city VARCHAR(20),  
  state VARCHAR(2),  
  zip INTEGER,  
  password VARCHAR(20)  
);
```

```
CREATE TABLE locations (
  itemid SERIAL PRIMARY KEY,
  type INTEGER,
  description VARCHAR(20),
  lng REAL,
  lat REAL
);
```

```
CREATE TABLE photographs (
    photoid PRIMARY KEY,
    locationid INTEGER
);
```

[illegible]

Query 1   finalproject - Schema   users - Table   **locations - Table**   photographs - Table

Table Name:    Schema: **finalproject**

### Prompt 3

```
ALTER TABLE locations
MODIFY type VARCHAR(255) NOT NULL,
MODIFY description VARCHAR(255) NOT NULL,
MODIFY lng DECIMAL(9,6) NOT NULL,
MODIFY lat DECIMAL(9,6) NOT NULL;
```

```
ALTER TABLE users
MODIFY name VARCHAR(255) NOT NULL,
MODIFY username VARCHAR(255) NOT NULL,
MODIFY password VARCHAR(255) NOT NULL;
```

```
ALTER TABLE photograph
MODIFY photoid INT NOT NULL,
MODIFY locationid INT NOT NULL;
```

#### Prompt 4

```
CREATE UNIQUE INDEX idx_photograph_photoid ON photograph (photoid);
```

#### Prompt 5

```
INSERT INTO users (name, username, address, city, state, zip, password)
VALUES ('Sam Smarf', 'ssmarf', '356 A Street', 'Beefy', 'PA', 19943, 'swimming');
```

```
INSERT INTO users (name, username, address, city, state, zip, password)
VALUES ('Wendy Grog', 'wgrog', '900 Star Street', 'Mary', 'MD', 21340, 'wells');
```

```
INSERT INTO users (name, username, address, city, state, zip, password)
VALUES ('Joe Jogger', 'jjogger', '183713 N North Street', 'Norther', 'WV', 51423, 'tarts');
```

Query 1 × finalproject - Schema users - Table locations - Table photographs - Table photograph - Table

1 • `SELECT * FROM users`

Result Grid

	userid	name	username	address	city	state	zip	password
▶	1	Sam Smarf	ssmarf	356 A Street	Beefy	PA	19943	swimming
	2	Wendy Grog	wgrog	900 Star Street	Mary	MD	21340	wells
	3	Joe Jogger	jjogger	183713 N North Street	Norther	WV	51423	tarts
	4	Bonnie Buntcake	bbunt	6709 Wonder Street	Wonderbread	OH	46105	edectic
*	NULL	NULL	NULL	NULL	NULL	NULL	NULL	NULL

## Prompt 6

Query 1 × finalproject - Schema users - Table locations - Table photographs -

1 `SELECT count(*) from users`

Result Grid

	count(*)
	4

### Prompt 7

```
ALTER TABLE photograph  
ADD COLUMN userid INT AFTER locationid;
```

Info	Columns	Indexes	Triggers	Foreign keys	Partitions	Grants	DDL	
Column	Type	Default Value	Nullable	Character Set	Collation	Privileges		
locationid	int		NO			select,insert,update,references		
photoid	int		NO			select,insert,update,references		
userid	int		YES			select,insert,update,references		

### Prompt 8

Considering the importance of data integrity, we need to ensure that the new "userid" column in the "photograph" table maintains a proper relationship with the "users" table. To achieve this, we should define a foreign key constraint on the "userid" column.

To modify the "photograph" table and add the "userid" column with a foreign key constraint, we can use the ALTER TABLE statement as follows:

```
ALTER TABLE photograph  
ADD COLUMN userid INT,  
ADD CONSTRAINT fk_userid FOREIGN KEY (userid) REFERENCES users (userid);
```

By establishing this foreign key constraint, we ensure that the values in the "userid" column of the "photograph" table correspond to valid user IDs existing in the "users" table. This helps maintain data integrity by preventing inconsistencies and ensuring referential integrity between the two tables.

### Prompt 9

```
INSERT INTO locations (type, description, lng, lat)  
VALUES  
(1, 'Independence Hall', 794.35, 651.43),  
(2, '6709 Wonder Street', 323.41, 412.22),  
(1, 'Sunrise', 221.45, 132.43),  
(2, '356 A Street', 123.32, 222.43),  
(1, 'Mountains', 34.12, 87.99),  
(2, '900 Star Street', 1071.9, 206.45),  
(1, 'Moonrise', 816.2, 111.2),  
(2, '183714 N North Street', 176.11, 11.176);
```

```
INSERT INTO photograph (photoid, locationid, userid)
VALUES (1, (SELECT itemid FROM locations WHERE description = 'Independence Hall'), 1);
```

```
INSERT INTO photograph (photoid, locationid, userid)
VALUES (2, (SELECT itemid FROM locations WHERE description = 'Independence Hall'), 1);
```

```
INSERT INTO photograph (photoid, locationid, userid)
VALUES (3, (SELECT itemid FROM locations WHERE description = 'Sunrise'), 3);
```

```
INSERT INTO photograph (photoid, locationid, userid)
VALUES (4, (SELECT itemid FROM locations WHERE description = '183714 N North Street'),
4);
```

The screenshot shows a database query tool interface. At the top, there are tabs for 'Query 1', 'finalproject - Schema', 'users - Table', 'locations - Table', 'photographs - Table', 'photograph - Table', and 'users'. Below the tabs is a toolbar with various icons. The query editor shows the text: `1 • SELECT * FROM locations`. Below the query editor is a 'Result Grid' section. It has a toolbar with 'Filter Rows', 'Edit', 'Export/Import', and 'Wrap Cell Content'. The result grid displays the following data:

	itemid	type	description	lng	lat
▶	9	1	Independence Hall	794.350000	651.430000
	10	2	6709 Wonder Street	323.410000	412.220000
	11	1	Sunrise	221.450000	132.430000
	12	2	356 A Street	123.320000	222.430000
	13	1	Mountains	34.120000	87.990000
	14	2	900 Star Street	1071.900000	206.450000
	15	1	Moonrise	816.200000	111.200000
	16	2	183714 N North Street	176.110000	11.176000
•	NULL	NULL	NULL	NULL	NULL

Query 1 × finalproject - Schema users - Table locations - Table photographs - Table photograph - Table

Limit to 1000 rows

```
1 • SELECT * FROM photograph
```

Result Grid

	photoid	locationid	userid
▶	1	9	1
	2	9	1
	3	11	3
	4	16	4
*	NULL	NULL	NULL

### Prompt 10

Query 1 × finalproject - Schema users - Table locations - Table photographs - Table photograph - Table

Limit to 1000 rows

```
1 SELECT name FROM users
```

Result Grid

	name
▶	Sam Smarf
	Wendy Grog
	Joe Jogger
	Bonnie Buntcake

## Prompt 11

Query 1 x finalproject - Schema users - Table locations - Table photographs - Table photograph

Limit to 1000 rows

```
1 SELECT name FROM users, photograph WHERE users.userid = photograph.userid;
```

Result Grid

name
Sam Smarf
Sam Smarf
Joe Jogger
Bonnie Buntcake

## Prompt 12

Query 1 x finalproject - Schema users - Table locations - Table photographs - Table photograph - Table users

Limit to 1000 rows

```
1 • SELECT DISTINCT name FROM users, photograph WHERE users.userid = photograph.userid;  
2
```

Result Grid

name
Sam Smarf
Joe Jogger
Bonnie Buntcake
